Minecraft Setup:

1: Install Minecraft

1) Open the terminal and **cd** (change directory) into my folder:
```
$ cd folder_location
```

2) Run this command in the terminal to launch Minecraft:
```
$ java -jar ./Minecraft\ Launcher.jar
```

3) When the game opens:
- Click on **Options**
- Checkmark on the option **Stay Logged In**

4) In the login prompt, use these credentials:
     username = *first_name*

5) Once that's done, launch minecraft and get to the **home screen**.
   After the home screen, **exit** the game.

2: Install the mods

1) Go inside the minecraft folder (if using **file manager**, hit (Ctrl + H) instead):
```
$ cd ~/.minecraft
```

2) Once you are in the `~/.minecraft` folder, copy and paste my **mods** folder inside.

3) Go back to my main folder, and **install forge** by running:
```
$ java -jar ./forge-1.12.2-14.23.5.2768-install.jar
```

4) Make sure **Install client** is selected, then click OK.

3: Start Playing Minecraft

1) Launch the game again (the 2nd step from **Install Minecraft** section)

2) Once you are logged in, in the bottom left corner, click on the drop-down menu labeled **Version**

3) Now here, we're obviously going to choose the forge profile.
   Scroll all the way down, and it should be something like:
 release 1.12.2-forge…

4) Once that's selected, click on **Edit Profile**.

5) Below the **Java Settings (Advanced)** section, **checkbox** JVM Arguments,
and **only** paste this onto the line:
`-Xmx2G  -Xmx2G`

6) **Save Profile**, and Nice! You're ready to play minecraft!
